- A. Is the proposed development or structure located within the mapped 100-year floodplain? [] Yes [] No

FIRM Panel # _____ Zone _____ BFE _____
 Is the proposed development located in a mapped floodway? [] Yes [] No Panel # _____

- B. Is a Town Floodplain Development Permit required for this structure/development? [] Yes [] No

NOTE: This information is based on the Regulatory Floodplain Map for the Town of Clay. This information does not imply the referenced property will or will not be free from flooding or damage. A property not in a Regulatory Floodplain Map may be damaged by a flood greater than that predicted on the FIRM or from a local drainage problem not shown on the maps. This information does not create liability on the part of the Town, or its officers or employees for any damage that results from reliance on this information.

Date

Town of Clay

§ 112-12. Floodplain development permit.

- A. Purpose. A floodplain development permit is hereby established for all construction and other development to be undertaken in areas of special flood hazard in this community for the purpose of protecting its citizens from increased flood hazards and insuring that new development is constructed in a manner that minimizes its exposure to flooding. It shall be unlawful to undertake any development in an area of special flood hazard, as shown on the Flood Insurance Rate Map enumerated in § 112-6 without a valid floodplain development permit. Application for a permit shall be made on forms furnished by the local administrator and may include, but not be limited to: plans, in duplicate, drawn to scale and showing: the nature, location, dimensions, and elevations of the area in question; existing or proposed structures, fill, storage of materials, drainage facilities, and the location of the foregoing.
- B. Fees. All applications for a floodplain development permit shall be accompanied by an application fee of \$100. In addition, the applicant shall be responsible for reimbursing the Town of Clay for any additional costs necessary for review, inspection and approval of this project. The local administrator may require a deposit of no more than \$500 to cover these additional costs.

§ 112-13. Application for permit.

The applicant shall provide the following information as appropriate. Additional information may be required on the permit application form.

- A. The proposed elevation, in relation to mean sea level, of the lowest floor (including basement or cellar) of any new or substantially improved structure to be located in Zones A1-A30, AE or AH, or Zone A if base flood elevation data are available. Upon completion of the lowest floor, the permittee shall submit to the local administrator the as-built elevation, certified by a licensed professional engineer or surveyor.
- B. The proposed elevation, in relation to mean sea level, to which any new or substantially improved nonresidential structure will be floodproofed. Upon completion of the floodproofed portion of the structure, the permittee shall submit to the local administrator the as-built floodproofed elevation, certified by a professional engineer or surveyor.
- C. A certificate from a licensed professional engineer or architect that any utility floodproofing will meet the criteria in § 112-16C, Utilities.
- D. A certificate from a licensed professional engineer or architect that any nonresidential floodproofed structure will meet the floodproofing criteria in § 112-18, Nonresidential structures.
- E. A description of the extent to which any watercourse will be altered or relocated as a result of proposed development. Computations by a licensed professional engineer must

be submitted that demonstrate that the altered or relocated segment will provide equal or greater conveyance than the original stream segment. The applicant must submit any maps, computations or other material required by the Federal Emergency Management Agency (FEMA) to revise the documents enumerated in § 112-6, when notified by the local administrator, and must pay any fees or other costs assessed by FEMA for this purpose. The applicant must also provide assurances that the conveyance capacity of the altered or relocated stream segment will be maintained.

- F. A technical analysis, by a licensed professional engineer, if required by the local administrator, which shows whether proposed development to be located in an area of special flood hazard may result in physical damage to any other property.
- G. In Zone A, when no base flood elevation data are available from other sources, base flood elevation data shall be provided by the permit applicant for subdivision proposals and other proposed developments (including proposals for manufactured home and recreational vehicle parks and subdivisions) that are greater than either 50 lots or five acres.
